In an ancient, benign and natural cycle, the goodness which filters through rock and soil, seeps into the ocean to be absorbed by thousands of marine vegetables. Of these Seagreens® is the most nutritious, cut every 3-4 years, without harming the marine environment, so the plants grow again to maturity. Like our bodies, the ocean contains some 100 nutrients needing constant replacement. Seagreens® give you well over 70 in products you can use every day, in balanced proportions that are the most consistent and widespread in Nature.
